Architecture Decision Record Register

Version 1.0 | Approved Baseline

Every Guest Matters. Every Event Flows.

Document Control

Document ID	EF-DOC-002
Title	Architecture Decision Record Register
Version	1.0
Status	Approved Baseline
Product	EventFlow
Document Owner	Product Owner
Technical Owner	Solution Architect
Created	2026-08-06
Last Updated	2026-08-06
Classification	Internal Architecture Governance
Related Documents	EF-DOC-000, EF-DOC-001, EF-DOC-003, EF-DOC-004, EF-DOC-005

Revision History

Version	Date	Status	Summary
0.1	2026-08-06	Draft	Initial ADRs established during product formation.
1.0	2026-08-06	Approved Baseline	Sprint 1 ADR register approved with ADR-001 through ADR-012.

Approval Record

Role	Approval	Date
Product Owner	Approved Baseline	2026-08-06
Solution Architect	Reviewed and Baseline Prepared	2026-08-06

1. Purpose

The ADR Register is the permanent index of significant EventFlow product and architecture decisions. Accepted ADRs are not silently rewritten. If a decision changes, a new ADR supersedes the old one.

2. ADR Status Model

Proposed -> Accepted -> Implemented -> Deprecated or Superseded.

3. Register

ID	Title	Category	Status	Decision Summary
----	-------	----------	--------	------------------

ADR-001	Product Identity: EventFlow	Product	Accepted	Develop the platform as the generic product EventFlow rather than Lui60 Event Manager.
ADR-002	Event as Root Business Entity	Architecture	Accepted	All event-scoped business objects shall explicitly belong to an Event.
ADR-003	Separate Invitation and Attendee Entities	Domain Model	Accepted	Invitation represents invitation entitlement/context; Attendee represents a person.
ADR-004	Configuration Over Hard-Coding	Architecture	Accepted	Event-specific names, dates, venue, branding, wording, artwork, deadlines, and templates are configuration.
ADR-005	Documentation as First-Class Deliverable	Governance	Accepted	Documentation must be updated as part of releases and architectural change.
ADR-006	Mobile-First Public Experience	UX	Accepted	Guest-facing flows are designed for smartphones first.
ADR-007	Normalize Companions into Attendees	Database	Accepted	Companion submissions shall become attendee records when attendee-level operations are required.
ADR-008	High-Entropy Personalized Invitation Tokens	Security	Accepted	Use unique high-entropy tokens in personalized invitation links;

				do not expose email/password as public credentials.
ADR-009	Provider-Agnostic Communications	Integration	Accepted	Email/SMS providers are adapters behind EventFlow communication services.
ADR-010	Staged Release Model	Delivery	Accepted	Use documented sprint/release gates, semantic versioning, tags, and controlled migrations.
ADR-011	GitHub as Engineering System of Record	Governance	Accepted	GitHub repository history is the authoritative engineering history for source, controlled markdown documentation, tags, and release metadata.
ADR-012	Capacity Tiers A-C for v1.x	Scalability	Accepted	Design v1.x primarily for up to 5,000 attendees per event, with Tier D treated as future platform scale.

4. Governance

1. Every material architectural decision shall be represented by an ADR when the decision has meaningful long-term consequences.
2. Accepted ADRs remain historical records.
3. A changed decision is documented by a new ADR that explicitly supersedes prior ADRs.
4. ADRs should reference related PRD requirements, architecture sections, database changes, and releases where applicable.

5. Sprint 1 Baseline

ADR-001 through ADR-012 form the approved architecture decision baseline for the EventFlow documentation foundation.
